# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

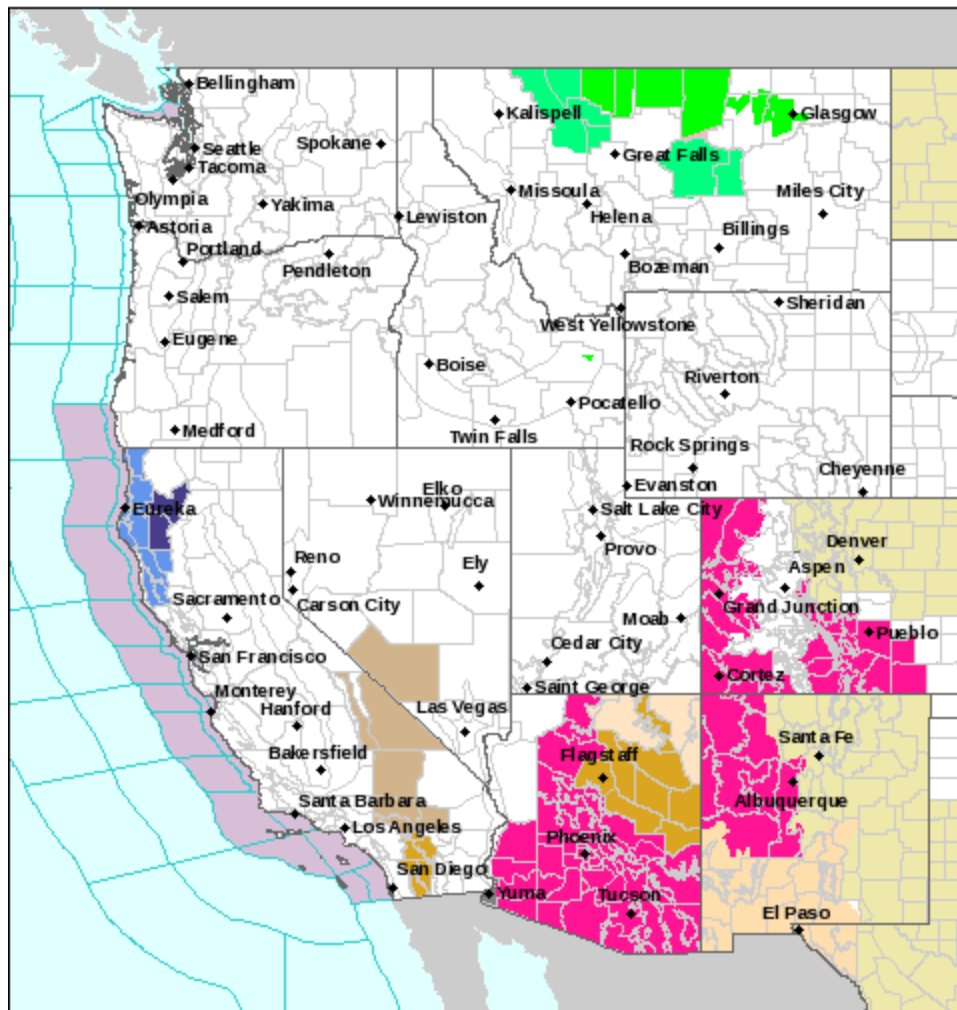

The next Pacific low pressure system to impact the Northern California (CA) region is fairly weak and it will move onshore this afternoon. A few showers from this low have already developed in northern areas. Scattered showers are expected in the mountains today with snow levels around 4,000 feet. Isolated showers are possible at lower elevations as well. The low will move into central CA by early Thursday. Rain chances are higher in the western and southern portions of the region, but amounts will be light, from a trace to a quarter of an inch. The low will move out of the area and rain chances will end by Thursday afternoon. By Thursday afternoon northerly winds will develop from the western Cascade-Sierra slopes to the foothills on the west side of the Sacramento Valley. Peak gusts will be 20-25 mph. Friday through Monday will be dry with temperatures 10-15 degrees above normal as high pressure builds in from the Pacific. N-NE winds will continue in the same areas, with peak gusts of 25-30 mph coming Saturday and Sunday mornings. Minimum afternoon humidity over the weekend will be 10-15% in the areas affected by the winds.

## **SOUTHERN CALIFORNIA**

Southwest winds will increase this afternoon in advance of a cold, compact storm which will quickly scoot through the area tonight into Thursday morning. High clouds will gradually increase this afternoon, but despite this, temperatures should climb into the 50s and 60s in the mountains to around 80 across lower elevations of Southern California. Winds of 15-30 mph will be common across the desert this afternoon. Tonight, the center of the storm system will pass over the southern San Joaquin Valley which should result in scattered shower activity. Since the air mass will be cold and unstable, one or two thunderstorms will also be possible across Central CA tonight. Brief moderate to heavy rain may occur near the higher terrain from Santa Barbara and Kern County northward. The snow level will drop to 4,500 feet and a brief flurry may be possible across I-5 and I-15 early Thursday morning. Storm total precipitation will be light with most areas seeing under a quarter of an inch, but amounts will be highly variable due to the showery nature of the storm system. Skies will clear out from north to south Thursday with a stiff northwest wind developing by the afternoon hours. Winds of 25-40 mph will be possible over the mountains and desert with some gusts over 50 mph possible in Kern County toward evening. Temperatures will be 10-20 degrees cooler Thursday, but a warming trend will quickly follow Friday into the weekend. Expect partly to mostly sunny skies and light winds Saturday and Sunday with highs climbing to above normal readings. Highs will approach 90 in some of the valleys by Sunday, but coastal areas will see much cooler temperatures with marine layer stratus returning during the night and morning hours.
